BRACELET OF THORNS

BRACELET MADE FROM THE PRECIOSA Thorn™ AND PRECIOSA Pellet™ PRESSED BEADS Traditional Czech Beads

PRECIOSA ORNELA has presented a new bead from the PRECIOSA Traditional Czech Beads brand which has been produced in crystal with various types of surface finishes. The slim elongated shape of a glass thorn with dimensions of 5 x 16 mm, PRECIOSA Thorn™, supplements the series of fashion and popular costume jewelry accessories and unveils other options in the technology used during the production of pressed beads. Try using it in combination with another new practical product, the PRECIOSA Pellet™ Pressed Bead, whose shape enables it to supplement many varied types of beads and seed beads. The so-called interlocking effect is enabled by the central slimming of the glass cylinder in the 4 x 6 mm size which means that the individual beads interlock precisely during a simple stringing. Both of these beads offer new adventures when looking for suitable combinations and connections with selected beads from the existing PRECIOSA Traditional Czech Beads range. They are especially excellent partners for both sizes of the PRECIOSA Farfalle™ seed beads.

We wish you much adventurous inspiration when discovering further combinations and options using the beads and seed beads from the PRECIOSA Traditional Czech Beads brand.

Materials and Tools:

PRECIOSA Thorn™ Pressed Bead (TH)
111 01 340; 5 x 16 mm, 00030/27137 (100x)

PRECIOSA Pellet™ Pressed Bead (P)
111 01 339; 4 x 6 mm, 00030/27137 (101x)

Memory wire (5, 6 or 7 cm in diameter), an oval, a pendant, needle nose and snipping pliers

Difficulty:

Procedure:

The procedure for making this product is very simple. The basic procedure involves the stringing of individual beads onto memory wire. Given the fact that this wire is quite rigid, it is necessary to use high quality pliers both for snipping the wire and for creating the outer loops. Given the rigidity of the memory wire, the creation of the end loops requires a lot of strength and skill.

Step 1:
Select the number of turns of the memory wire. In our case, we have used four and ¼ turns. Cut the required length off using the snipping pliers. Create a simple or double loop at one end using the needle nose pliers. (fig. no. 1)

Step 2:
Alternately string 1x P and 1x TH onto the memory wire. String 100x TH onto the selected length of memory wire 5 cm in diameter and finish the entire stringing with 1x P. The total stringing therefore consists of 101x P. Given the fact that we have selected a bead with a decoration which is only present on one side, string the individual TH in such a way so that the decorated side is in the same place on all the beads. (fig. no. 2)

Step 3:
Straighten the individual beads and tighten them slightly. About 2 cm of wire must remain free on the other end of the wire and this should then be formed into a double loop using the needle nose pliers (fig. no. 3). If you decide to only make a simple loop, about 1 cm of wire will be sufficient.

Step 4:
One of the end loops can be strung with an oval onto which the metal pendant is attached.
